- 3 Message from the Editor-in-Chief

### ARM'S LENGTH

- 5 Molecular Communication: Interconnecting Tiny NanoBio Devices

### EXPERIMENTAL METHODS

- 11 Rethinking Evaluations of mHealth Systems for Behavior Change

### AWARDS

- 15 2018 ACM SIGMOBILE Rockstar Award: Kyle Jamieson, Princeton University

### STANDARDS

- 16 An Overview of 3GPP Exposed Services for IoT Service Platforms

### HIGHLIGHTS

- 22 TrailSense: Crowdsensing Risky Mountain Trail Segments

- 27 TouchPower: Interaction-based Power Transfer for Power-as-needed Devices

- 32 Predicting Symptom Trajectories of Schizophrenia Using Mobile Sensing

- 38 The Dermal Abyss: Color-Changing Tattoos for Medical Diagnostics

# MESSAGE FROM THE EDITOR-IN-CHIEF

## CONTRIBUTORS

### EDITOR-IN-CHIEF

**Eyal de Lara**, University of Toronto

**MANAGING EDITOR** **Donna Paris**

**DESIGNER** **JoAnn McHardy**

### SENIOR ADVISORS (Past Editors-in-Chief)

**Paramvir Bahl**, Microsoft Research

**Suman Banerjee**, University of Wisconsin, Madison

**Srikanth Krishnamurthy**, University of California, Riverside

**Jason Redi**, BBN Technologies

**Mani Srivastava**, University of California, Los Angeles

**Nitin Vaidya**, University of Illinois, Urbana-Champaign

### SECTION EDITORS

**Ardalan Amiri Sami**, University of California, Irvine

**Aruna Balasubramanian**, Stony Brook University

**Nilanjan Banerjee**, University of Maryland, Baltimore County

**Romit Roy Choudhury**, University of Illinois, Urbana-Champaign

**Eduardo Cuervo**, Microsoft Research

**Prabal Dutta**, University of Michigan

**Carla S. Ellis**, Duke University

**Michelle X. Gong**, Google

**Haitham Hassanieh**, University of Illinois, Urbana-Champaign

**Julie A. Kientz**, University of Washington

**Nic Lane**, Bell Labs and University College, London

**Robert LiKamWa**, Arizona State University

**Shiwen Mao**, Auburn University

**Iqbal Mohamed**, Samsung Research America

**Sami Rollins**, University of San Francisco

**Lin Zhong**, Rice University

**Xia Zhou**, Dartmouth College

### ACM STAFF

**Julie Goetz**, *Administrator – Publications Production*

**Adrienne Griscti**, *Program Coordinator – SIG Publications*

**Fran Spinola**, *Program Coordinator – SIG Activities*

### SIGMOBILE EXECUTIVE COMMITTEE

**Suman Banerjee**, University of Wisconsin-Madison, *Chair*

**Lili Qiu**, University of Texas Austin, *Vice Chair*

**Marco Gruteser**, Rutgers University, *Treasurer*

**Alec Wolman**, Microsoft Research, *Secretary*

**Roy Want**, Google, *Past Chair*

**Eyal de Lara**

IN THIS ISSUE, we highlight three papers from ACM UbiComp 2017, as well as one paper that was published at the 2017 ACM International Symposium on Wearable Computers.

“TrailSense: Crowdsensing Risky Mountain Trail Segments,” by Keunseo Kim, Hengameh Zabihi, Heeyoung Kim, and Uichin Lee describes a mobile crowdsensing system that uses smartphone

sensing to automatically label mountain trail segments by analyzing walking patterns of individual hikers. TrailSense can be used to identify risky mountain trail segments to prevent accidents.

In “TouchPower: Interaction-based Power Transfer for Power-as-needed Devices,” Tengxiang Zhang, Xin Yi, Chun Yu, Yuntao Wang, Nicholas Becker, and Yuanchun Shi describe a mechanism to power up electronic devices only during interaction by taking advantage of the natural contact or proximity between users and objects during interaction to transfer power. The paper describes a prototype that transfers on-body power to off-body power-as-needed devices through contact between electrodes on a glove worn by the user and the target device.

In “Predicting Symptom Trajectories of Schizophrenia Using Mobile Sensing,” Rui Wang, Weichen Wang, Min Hane Aung, Dror Ben-Zeev, Rachel Brian, Andrew T. Campbell, Tanzeem Choudhury, Marta Hauser, John Kane, Emily A. Scherer, and Megan Walsh describe a system that can predict symptoms of schizophrenia for people living out in the community. Predictions are based on self-reported assessments and passive sensing of a range of features, including physical activity, sociability, mobility, sleep, and phone use.

Lastly, “The Dermal Abyss: Color-Changing Tattoos for Displaying Biodata,” by Katia Vega, Nan Jiang, Xin Liu, Viirj Kan, Nick Barry, Pattie Maes, Ali K. Yetisan, and Joe Paradiso describes the use of tattoos to create an interactive display within the skin to reveal internal changes in the body. The technique replaces traditional tattoo inks with biosensors, in which colours or intensity

change in response to variations of biomarkers in the interstitial fluid. The paper describes tattoo biosensors that report on the concentration of sodium ions, glucose, and pH in the skin.

The rest of the issue consists of four additional columns:

The Arm's Length column features a paper by Nariman Farsad that discusses recent advances in the fields of bioengineering and nanotechnology, which have resulted in the emergence of tiny devices of sub-millimeter – and even micron or less – dimensions that can perform sensing and actuation. The article discusses how these nano devices can communicate with each other using a nature-inspired technique. Known as *molecular communication*, the technique uses chemical signals as carriers of information by encoding data into biological compounds, such as proteins or DNA molecules, or synthetic compounds, such as gold nanoparticles. This technology has many potential applications in a variety of fields, such as medicine, environmental remediation, manufacturing, and storage.

In the Experimental Methods column, authors Predrag Klasnja and Eric B. Hekler address the challenge of evaluating mobile health (mHealth) apps and wearables designed to promote healthy behavior changes, such as losing weight, increasing physical activity, or adhering to a medication regimen. The authors argue that the current approach is intended to establish

whether the system as a whole is effective at changing target behaviors; unfortunately, this approach provides no insight about how specific aspects of the system contribute to its effectiveness and, as a result, the evidence it produces is of limited usefulness for informing future work. Instead, the authors describe an alternative strategy rooted in behavioral science research on intervention optimization that can assess causal effects of distinct intervention components and their interactions.

The Awards column penned by Margaret Martonosi recognizes Kyle Jamieson, the recipient of the 2018 ACM SIGMOBILE RockStar Award for his impactful and innovative early-career contributions, “bridging computer networking and signal processing to advance wireless communications and sensing.”

Finally, the Standards column features an article by Michael Starsinic, Dale Seed, and Chonggang Wang describing the Network at the Service Capability Exposure Function (SCEF), a new API defined in the latest 3GPP release that provides IoT servers access to the capabilities and services of the 3GPP network, including APIs for monitoring user equipment events and status, service configuration, network coordination, and control plane data exchange.

I hope you enjoy this issue. I welcome your thoughts about GetMobile in general, and this issue in particular. ■

## EDITORIAL CORRESPONDENCE

Address to: Prof. Eyal de Lara, 40 St. George Street, Suite 4283, Department of Computer Science, University of Toronto, Toronto, Ontario M5S2E4, Canada, Email: [getmobile\\_editor@acm.org](mailto:getmobile_editor@acm.org). For specific department email addresses, see the “Call for Contributions” on page 59.

## NOTICE TO CONTRIBUTING AUTHORS TO SIG NEWSLETTERS

By submitting your article for distribution in this Special Interest Group publication, you hereby grant to ACM the following non-exclusive, perpetual, worldwide rights: to publish in print on condition of acceptance by the editor, to digitize and post your article in the electronic version of this publication, to include the article in the ACM Digital Library, and to allow users to copy and distribute the article for noncommercial, educational or research purposes. However, as a contributing author, you retain copyright to your article and ACM will make every effort to refer requests for commercial use directly to you.

## ACM GETMOBILE

ACM SIGMOBILE publishes ACM GetMobile four times annually for its members. The Newsletter has a controlled distribution with the compliments of ACM SIGMOBILE. GetMobile assumes no responsibility for the return of submitted manuscripts, photographs, artwork, or other material. Nothing in this publication shall constitute an endorsement by ACM, or SIGMOBILE or GetMobile (collectively, the “Publisher”) of any information contained in this publication, and the Publisher disclaims any liability with respect thereto or the use or reliance on any such information. The information contained in the publication is in no way to be construed as a recommendation by the Publisher of any kind or nature whatsoever, nor as a recommendation of any industry standard, nor as an endorsement of any product or service, nor as an opinion or certification regarding the accuracy of any such information.
